There exists an Ω such that:

If there exists a solution, then there exists one where each variable is bounded by $\boldsymbol{\Omega}.$

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

Furthermore, $log(\Omega)$ is polynomial in the input size

There exists an Ω such that:

If there exists a solution, then there exists one where each variable is bounded by $\boldsymbol{\Omega}.$

Furthermore, $log(\Omega)$ is polynomial in the input size

This is a (small variation of) a known result. (Papadimitriou, 1981)

Problem: the propagation chain gets way too long $(\mathcal{O}(\Omega n))$

Introduction	boundedness	arc consistency	edge shortening	edge compression
0000	O	00	●○	
Edge short	ening			

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

Consider the first two steps of the chain $x_3 \ge -10 \implies x_4 \ge -2 \implies x_1 \ge 0$

- $x_3 \le 4x_4$
- $x_4 \le 2x_1 2$

Introduction	boundedness	arc consistency	edge shortening	edge compression
0000	O	00	●○	
Edge short	tening			

◆□▶ ◆□▶ ◆□▶ ◆□▶ □ のQ@

Consider the first two steps of the chain $x_3 \ge -10 \implies x_4 \ge -2 \implies x_1 \ge 0$ • $x_3 < 4x_4$

- $x_4 \leq 2x_1 2$

This simplifies to $x_3 \leq 8x_1 - 8$

If we add this arc: $x_3 \ge -10 \implies x_1 \ge 0$

Consider the first two steps of the chain $x_3 \ge -10 \implies x_4 \ge -2 \implies x_1 \ge 0$ • $x_3 < 4x_4$

• $x_4 \leq 2x_1 - 2$

This simplifies to $x_3 \leq 8x_1 - 8$

If we add this arc: $x_3 \ge -10 \implies x_1 \ge 0$

Solution: preprocess graph, add new arc for every two consecutive arcs

Edge shor	tening			

◆□▶ ◆□▶ ◆ □▶ ◆ □▶ ● □ ● ● ●

Problem: this is not always valid

- $x_3 \le 2x_4$
- $2x_4 \leq x_1$

This does not combine into $x_3 \leq x_1$

Problem: this is not always valid

- $x_3 \le 2x_4$
- $2x_4 \le x_1$

This does not combine into $x_3 \leq x_1$

This only happens if the first arc has positive weight and the second one has negative weight.

▲ロ ▶ ▲周 ▶ ▲ 国 ▶ ▲ 国 ▶ ● の Q @

Problem: this is not always valid

- $x_3 \le 2x_4$
- $2x_4 \le x_1$

This does not combine into $x_3 \leq x_1$

This only happens if the first arc has positive weight and the second one has negative weight.

Solution: only add valid arc pairs

For any three consecutive arcs, we can combine at least one pair

After $\mathcal{O}(\log(\Omega n))$ many iterations, every propagation chain reduces to one of length at most 2.
